

SPECIALIST STORAGE

Environmentally Managed & Controlled Storage

Specialist Storage Facilities

Our Specialist Storage Facilities are located 600 ft underground and naturally provide a unique storage environment. Our Specialist Storage offers custom solutions for particular business and personal storage needs. We are able to guarantee a 100% environment managed and controlled storage options at no extra cost and no hidden surprises.

Environmentally Managed & Controlled Storage

Our facility employs cutting edge, climate control technology to augment the natural environment to regulate specific areas for extremely sensitive specialist storage.

We manage volume palletised storage for just about any business type. Furthermore, not only do we cater for specialist handling and storage we offer a comprehensive European wide logistics service.

Speedstore can create purpose built rooms and vaults or even cryogenically controlled storage areas. Speedstore's distinctive location makes almost anything possible.

PD5454

British Standard document archiving

Temperature Controlled

Constant temperature of 12.5C

Humidity Controlled

50% humidity all year around

Vermin & Insect Free

Books & paper stored safely

Zero UV Light

Perfect for wine storage

600 ft Underground

Unique secure storage environment

SPEEDSTORE

Secure / Climate Controlled / PD5454 / 20 million sqft

SPECIALIST STORAGE

Climate Control

Extreme heat or cold can spoil some goods such as; electronic equipment & media, photography equipment, vinyl records, comics, antiques and paintings and much more.

Humidity Control

One of the primary difficulty in storage is high humidity levels. Relative humidity of 60% and above allows mites, moulds, fungus, oxidation, paper rot and wood degradation to take place. Typically storage facilities depend on an air conditioning to dry the air. The complication with this is higher temperatures don't always coincide with elevated humidity levels. Reports demonstrate that higher humidity is more inclined to develop at night, whilst the higher temperature ranges commonly arise in the afternoon.

UV Light Control

Direct sunlight or incandescent light generally can detrimentally react with phenolic substances in wine and produce possible wine defects. Fragile, light-bodied white wines are at the most risk from light exposure and for that particular factor, they're usually packed in dark wine bottles that provide some protection from light. Wines stored in transparent, light green and blue tinted bottles are the most susceptible to light and could need extra safeguards for storage.

Our facilities are equipped with comprehensive humidity & climate controlled systems that monitors and preserves the ideal conditions specific to your specialist storage needs and safeguards your goods against mould, mildew, oxidation, and degradation.

Specialist Storage examples include

- Museum Storage
- Document Storage
- Wine Storage
- Antique Storage
- Asset Protection
- Art Collections
